Ontario, Canada · Open to remote · Available to start January 2027

TECHNICAL SKILLS

Languages & Data: Python (pandas, scikit-learn, numpy, matplotlib, seaborn) · SQL · DAX · Advanced Excel · Google Sheets · R (basic)
BI & Analytics: Power BI · Google Analytics · Dashboard Design · Star Schema Modeling · Data Storytelling · Tableau (learning)
Databases & Automation: PostgreSQL · Supabase · SQLAlchemy · Airtable · Make.com · Zapier · Typeform
ML & Analysis: K-Means Clustering · Logistic Regression · Random Forest · Feature Engineering · EDA · A/B Testing
Business Analysis: Process Mapping · Current/Future State · Requirements Documentation · Stakeholder Reporting · Agile
Tools: Git · GitHub · Jupyter · VS Code · Lucidchart · Notion · Microsoft Office Suite

TECHNICAL PROJECTS

B2B Lead Management System — SentinelSec | Power BI · Zapier · Google Sheets · DAX
- Built zero-touch lead intake pipeline (Typeform to Zapier to Google Sheets) eliminating 100% of manual data entry and reducing routing cycle time to real-time
- Engineered multi-variable lead scoring algorithm using nested IF/AND/REGEX logic across 4 dimensions (firmographics 60 pts, intent 15 pts, domain authority 15 pts, timing 10 pts)
- Designed 3-page Power BI executive dashboard with DAX measures for SLA breach detection, response time analysis and Top 10 priority queue, saving an estimated 10+ hours of operational overhead per week

Credit Card Customer Segmentation — FinSight Analytics | Python · scikit-learn · PostgreSQL · Power BI
- Cleaned and feature-engineered 8,950-row financial dataset; applied K-Means clustering (K=4) validated by elbow method and silhouette scoring, identifying a Cash-Dependent At-Risk segment representing 29.3% of the customer base
- Engineered 5 behavioural features from 18 raw variables (spending intensity, cash dependency, payment behaviour, installment ratio, dormancy) using tier-based median imputation for missing values
- Pushed segmented data to a live PostgreSQL instance via SQLAlchemy and connected Power BI over DirectQuery for a 2-page interactive dashboard

Lead Conversion Prediction Model | Python · scikit-learn · Random Forest · pandas
- Built binary classification model (Logistic Regression vs. Random Forest) on 150 B2B leads, selecting on ROC-AUC given class imbalance; identified Lead_Score_Cal (56.3% importance) and Response_Time_Hours (43.7%) as dominant predictors
- Detected 0.96 multicollinearity between two candidate features, dropped the redundant variable and documented logistic regression majority class collapse transparently
- Delivered a ranked probability queue letting sales reps sort daily leads by predicted conversion likelihood, cross-validating findings against the rule-based scoring system from the lead management build

Support Ticket Routing System | Make.com · Airtable · Typeform · Process Mapping
- Mapped current-state vs. future-state process in Lucidchart, then implemented priority-based automation routing Enterprise tickets to senior agents and Critical bugs to an incidents channel within 60-second auto-acknowledgment
- Built Make.com scenario with 4-path router (Enterprise, Billing, Critical, Standard), logging all tickets to Airtable with auto-generated Ticket_ID, SLA_Deadline and Assigned_To

INDUSTRY PROJECT

Client Diagnostic Report Generator — The Clean Divorce · Riipen · Advance Ontario *April 2026 | 60 hrs*
- Designed end-to-end architecture for the Relationship Readiness Assessment Tool, a three-pathway diagnostic system (Amicable, Complex, High-Conflict) with matched tone, automated emails and downloadable resources per pathway
- Bridged Lovable front-end and Wix CMS back-end by designing email capture pages feeding user data into the CMS database, triggering conditional 5-part nurture sequences per pathway
- Produced technical developer handoff brief and 3 fillable resources; rated 5.0 / 5.0 on Critical Thinking, Creativity, Professionalism and Communication by CEO Suzanne Winlove-Smith

EXPERIENCE

Marketing Assistant — Ancillary Services · Ontario Tech University *Sep 2024 – Present*
- Build monthly performance dashboards in Excel and Google Analytics reporting engagement and sales trends to department managers and senior leadership, comparing social engagement against sales volume to show which campaigns converted rather than only which performed
- Present weekly performance insights and monthly reporting to management, translating engagement and sales data into decisions on what to continue, cut or scale; drove 20% growth in audience engagement with corresponding lifts in mobile app installs and food services sales
- Own marketing campaigns end to end at roughly two per semester, covering creative direction, prize structuring, cross-department coordination and post-campaign performance reporting
- Inform retail merchandising and stocking decisions using campaign performance and student engagement trends, contributing to increased in-store apparel sales
- Created internal workflows and documentation that standardised recurring processes and shortened onboarding for new staff

Residence Advisor · Ontario Tech University & Durham College *Aug 2023 – Apr 2024*
- Maintained compliance reporting for 150+ residents and produced documentation supporting a formal housing standards review, coordinating requirements across student and administrative stakeholders

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science, Specialization in Data Science · Ontario Tech University, Oshawa ON *Sep 2022 – Dec 2026*
- President's List Fall 2024 (3.94 GPA) · Dean's List Winter 2026 (3.52 GPA) · Global Leadership Scholarship ($10,000 CAD)
- Relevant coursework: Artificial Intelligence (A+) · Data Mining (A) · Statistics & Probability (A-) · Machine Learning I · Database Systems · Web Development
- Certifications: Google Data Analytics Professional (in progress) · DataCamp SQL Intermediate · Google Digital Marketing Fundamentals
